

Weekly Progress Report

Name: Vinayak D

Domain: Python Development

Date of Submission:

Week Ending: 01

I. Overview:

This week, the primary focus was on developing the File Organizer project using Python. The project aims to automatically organize files in a directory by categorizing them based on file types such as images, documents, and videos.

II. Achievements:

1. Project Development (File Organizer):

- Designed and implemented a system to scan directories.
- Categorized files based on extensions.
- Successfully created folders and moved files into respective categories.

2. Python Skills Enhancement:

- Gained practical knowledge of file handling using `os` and `shutil` libraries.
- Improved understanding of automation in Python.

3. Collaboration and Learning:

- Explored online tutorials and documentation to implement features effectively.

III. Challenges:

1. File Handling Issues:

- Faced issues in identifying file types correctly.
- Resolved by using proper extension matching techniques.

2. Folder Management:

- Difficulty in handling already existing folders.
- Solved using conditional checks before folder creation.

IV. Learning Resources:

1. Python Documentation:

- Used official Python docs for `os` and `shutil` modules.

2. Online Tutorials:

- Referred to YouTube and online coding platforms for implementation guidance.

V. Next Week's Goals:

1. Enhance the File Organizer:

- Add support for more file types.
- Improve efficiency of file sorting.

2. GUI Development:

- Plan to implement a simple user interface using Tkinter.

3. Testing and Optimization:

- Perform testing with large datasets and optimize performance.

VI. Additional Comments:

The project helped in gaining hands-on experience with Python and improved problem-solving skills in real-world scenarios.
