

Weekly Progress Report

Name: Vinayak D

Domain: Python Development

Date of Submission:

Week Ending: 02

I. Overview:

This week focused on enhancing the File Organizer project by adding more functionality and improving usability. Additionally, initial work was started on developing a simple graphical user interface (GUI) to make the application more user-friendly.

II. Achievements:

1. Project Enhancement (File Organizer):

- Added support for more file types such as PDFs, audio files, and compressed files.
- Improved file categorization logic for better accuracy.
- Enhanced folder structure for organized storage.

2. GUI Development (Tkinter):

- Started building a basic GUI using Tkinter.
- Implemented file selection and directory browsing features.
- Integrated backend file organizing logic with GUI.

3. Python Skills Enhancement:

- Learned basics of Tkinter for GUI development.
- Improved understanding of modular coding and function structuring.

III. Challenges:

1. GUI Integration Issues:

- Faced difficulty connecting backend logic with GUI elements.
- Resolved by restructuring code into functions and modules.

2. Handling Large File Sets:

- Performance slowed when processing large directories.
- Began optimizing file scanning and sorting methods.

IV. Learning Resources:

1. Python Documentation:

- Referred to Tkinter documentation for GUI components.

2. Online Tutorials:

- Watched tutorials on GUI development and project structuring.

V. Next Week's Goals:

1. Improve GUI Features:

- Add buttons, status messages, and better layout design.
- Improve user interaction and error handling.

2. Performance Optimization:

- Optimize file handling for faster execution.

3. Project Refinement:

- Clean code and improve readability.

- Prepare for final testing and deployment.

VI. Additional Comments:

This week helped in understanding how to integrate frontend (GUI) with backend logic. It also improved problem-solving skills in handling real-world application challenges.
